Deep learning e segmentazione per la biologia cellulare

Utilizzo del transfer learning per l'identificazione di cellule in microscopia

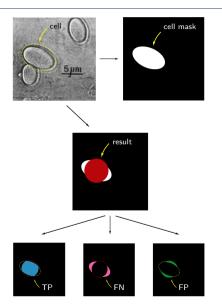

Alessandro Mastrofini

Elaborazione di Immagini Università degli Studi di Roma Tor Vergata

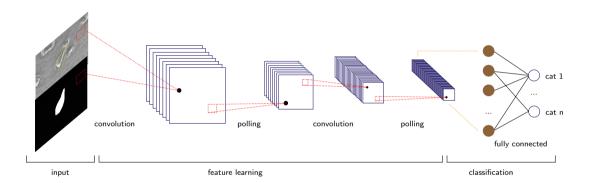

Image segmentation

- Pixel-based
- Edge-based
- Region-based
- Model-based
- Supervised methods

$$\begin{split} \mathsf{CM} &= \frac{\mathit{TP}}{\mathit{TP} + \mathit{FN}} = \frac{\mathit{TP}}{\mathsf{Total\ arai\ in\ GT}} \\ \mathsf{CR} &= \frac{\mathit{TP}}{\mathit{TP} + \mathit{FP}} = \frac{\mathit{TP}}{\mathsf{Total\ area\ in\ BW}} \\ \mathsf{FM} &= \frac{2 \cdot \mathit{CM} \cdot \mathit{CR}}{\mathit{CM} + \mathit{CR}} \in [0;1] \end{split}$$

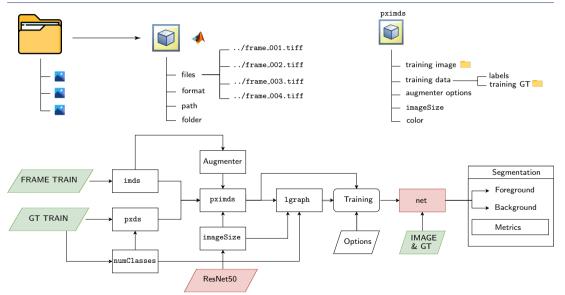

Transfer learning

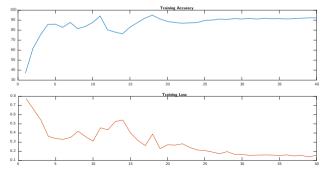

```
 \left\{ B \right\} == 1 \\ \left\{ N \right\} == 0 \\ 1 \\ 2 \\ \text{strcat(newPath, 'dataset\GT\_TRAIN')}, \dots \\ 2 \\ \left\{ N \right\} == 0 \\ 3 \\ \left[ "N", "B" \right], [0 \ 1]); \\ 1 \\ \text{pxLayer} = pixelClassificationLayer(... 'Name', 'labels', 'Classes', tbl. Name, ... 'ClassWeights', classWeights);}
```

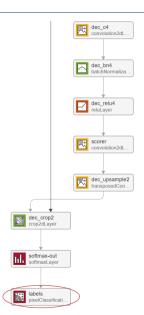

Training dataset

Classification layer and training

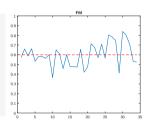

```
Ilgraph = deeplabv3plusLayers(imageSize,numClasses,"resnet50");
% balance predominance of 0
tbl = countEachLabel(pximds);
totalNumberOfPixels = sum(tbl.PixelCount);
frequency = tbl.PixelCount / totalNumberOfPixels;
classWeights = 1./frequency;
pxLayer = pixelClassificationLayer('Name', 'labels', 'Classes',...
tbl.Name, 'ClassWeights', classWeights);
lgraph = replaceLayer(lgraph, "classification",pxLayer);
options = trainingOptions('sgdm', 'MaxEpochs',30, ...
'MiniBatchSize',8, 'Plots', 'training—progress');
[net, info] = trainNetwork(pximds,lgraph,options);
```

Application

```
1 for l = 1:length(f_test)
2    testImage=imread([strcat(dataPath,'/FRAME_TEST_SEG/'),f_test(l).name]);
3    C_test = semanticseg(testImage,net);
4    D=C_test='B';
5    GTImage=imread([strcat(dataPath,'/GT_TEST/'),gt_train(l).name]);
6    [TP,FP,KD,CM,FM_test(l)]=evaluation_segmentation(...
7    bwareafilt(D,1),GTImage);
8    imshowpair(testImage,bwareafilt(D,1),'montage');
9    pause(0.5); drawnow;
10    clear C_test D testImage;
11 end
```
